Addressing the Food Security Crisis in Washington

Introduction

Northwest Harvest worked with the McKinsey & Company in creating a Washington State Food Security Report, Model and Dashboard to evaluate and understand the food security challenge in light of the COVID-19 crisis. Northwest Harvest has pulled data from the Food Security Model for every county to help share this information with our partners, and the greater community.

The following few pages go over how to read and interpret the information from the dashboard. The information from the dashboard has been converted to a three page spread for every county. The county pages are in alphabetical order.
How to read the dashboard

The dashboard contains modeling for two economic scenarios that could play out: Q2 Peak and Q4 Peak.

What does this mean? The gap between demand and supply may peak in August or December, depending on economic scenario.

Each county has a page for a Q2 Peak, and a page for a Q4 Peak.

A further explanation of the economic scenario Q2 and Q4.
How to read the dashboard

The maps of the counties display the food insecurity rate given the selected scenario. Food banks and meal programs are also marked on the maps.

In Q2 Peak scenarios, the food insecurity rate typically ranges from 5-15%, and in Q4 Peak scenarios, the rate is anywhere from 15% and up.

The spending gap refers to the amount of money needed monthly to address food insecurity given the economic scenario selected.

When possible, percentages are displayed within each census tract indicating the food insecurity rate.

The spending gap for a given county assumes a $74 spending gap per food insecure person, and counts the spending gap for the month of December 2020.

The key indicates what type of food program you see on the map, and how the color gradient corresponds with food insecurity rates.
How to read the dashboard

The demographics table displays demographic information at the county level.

Social Vulnerability Index: a dataset and index created by the Center for Disease Control to evaluate the social vulnerability of census tracts. The index takes 15 social factors into account to rank census tracks from 0-1 using percentiles. The following “SVI” demographics consist of the following:

- **Overall Social Vulnerability Index**: rates the vulnerability using an aggregation of the SVI themes mentioned below, with 0 being the least vulnerable and 1 being the most vulnerable.

- **SVI Socioeconomic Vulnerability**: determined by population below the poverty line, the unemployment rate, household median income, and population without a high school diploma.

- **SVI Minority and Language Vulnerability**: determined by populations of racial minorities, and people who speak English “less than well”.

- **SVI Housing and Transportation Vulnerability**: determined by populations who live in multi-unit homes, mobile homes, crowded living conditions, don’t have vehicle access, or live in group homes.

- **SVI Household Composition and Disability Vulnerability**: determined by populations of people 65 and older, 17 and younger, population with disability and single parent households.
